

Electrical Machines II - CECE317

Q<sub>1</sub>: Define The Transformer?

Q<sub>2</sub>: Explain briefly The Construction of Transformer?

Q<sub>3</sub>: What are The different Core types of The Transformer,  
"using sketches".

Q<sub>4</sub>: What are The insulation classes of The power Transformer?

Q<sub>5</sub>: State The Transformer types according To different  
classifications?

Q<sub>6</sub>: What is The power Transformer principle of operation?

Q<sub>7</sub>: Drive The EMF Equation of The Transformer?

Q<sub>8</sub>: prove That The voltage induced per turn in The  
Transformer is The same for Both Sides of The Transformer?

Q<sub>9</sub>: If it is desired to have 4.13 mWb maximum core flux  
in a Transformer operating at 110V and 60 Hz. Determine  
The required number of Turns on The primary side?
