## Postgraduate (Pre-master) Course

$\square$ Chapter 1:
Transmission Line Constants

- Chapter 2:

Transmission Line Models and Calculations

- Chapter 3:

Mechanical Design of Overhead T.L

- Chapter 4:
D.C. power Transmission Technology

## Chapter 1:

## Transmission Line Constants

## 1. Main parts of over head T .L.

Ground

## Types of conductors

$\square \quad$ Hard -drawn copper conductors .
$\square \quad$ Aluminum- core steel-rein forced (ACSR).
$\square \quad$ For rural electrification, all - aluminum conductors are used.
$\square \quad$ Steel wires are used as earthing wires for over head T. L.

## The main constants required are

$\square \quad$ Resistance ( R "ohm").
$\square \quad$ Inductance ( L "hennery") \& corresponding $X_{L}$.
$\square \quad$ Capacitance (C " farad" ) \& corresponding $X_{c}$.

## Resistance of over head T .L

$\square R=\rho L / A$
$\square$ Where :
R: resistance of T.L ( $\Omega$ )
$\rho$ : resistivity of T.L conductor ( $\Omega$.m )
$L$ : length of T.L (m)
A : cross -section area ( $\mathrm{m}^{2}$ )
$\square$ For hard -drawn conductors $: \rho=1.724 * 10^{-8} \Omega . m$ at $20^{\circ} \mathrm{C}$
$\square$ For all - aluminum conductors : $\rho=2.860 * 10^{-8} \Omega$.m at $20^{\circ} \mathrm{C}$

## Effect of Temperature on Resistance

$\square$ The resistance of T.L increases with Temperature
$\square$ The rise in resistance depends on the Temperature coefficient of conductor material ( $\alpha$ ).

$$
\frac{R_{t 2}}{R_{t 1}}=\frac{1 / \alpha_{0}+t_{2}}{1 / \alpha_{0}+t_{1}}
$$

Where :

$R_{\mathrm{t} 2}$ : Resistance of T .L at $\mathrm{t}_{2}$
$\mathrm{R}_{\mathrm{t} 1}$ : Resistance of T.L at $\mathrm{t}_{1}$
$\alpha_{0}$ : Temperature coefficient at $0^{\circ} \mathrm{C} \quad\left(1 /{ }^{\circ} \mathrm{C}\right)$
$\mathrm{T}_{1} \quad$ : First temperature
$\mathrm{T}_{2}$ : Second temperature
$\square$ For hard - drawn copper
For aluminum

$$
\begin{aligned}
& \alpha_{0}=0.0041 \% / \mathrm{C} \\
& \alpha_{0}=0.0038 \%
\end{aligned}
$$

## Skin Effect on Conductors

when alternating current is passing through conductors, there is an unequal distribution of current in any cross - section of the conductor, the current density at the surface being higher than the current density at the center of the conductor . this causes larger power loss for a given r.m.s alternating current than the loss when the same value of $D C$ is flowing in the conductor.
$\square R_{\mathrm{ac}}>R_{\mathrm{dc}}$

$$
\mathrm{R}_{\mathrm{ac}}=\frac{\text { Average power losses }}{\mathrm{I}_{\mathrm{rms}}^{2}}
$$

Skin effect ratio $=\frac{\mathrm{R}_{\mathrm{ac}}}{\mathrm{R}_{d c}}$

## Which depends on

- Permeability (Type of material).
- Area of cross section of the conductor.
- Frequency of the supply.

## Inductance \& Reactance of O.H.T.L

Inductance of overhead transmission line depends on:
$\square$ Size of conductor.
$\square$ Distance between conductors.
$\square$ Material of conductors.

## Inductance \& Reactance of O.H.T.L

$$
\mathrm{H}=\frac{I}{2 \pi x}
$$

H: electric field intensity.

$$
\begin{array}{ll}
\mathrm{B}=\frac{2 * 10^{-7}}{x} I & \mathrm{wb} / \mathrm{m}^{2} \\
\mathrm{H}=\frac{I x}{2 \pi r^{2}} & \text { A.turn } / \mathrm{m}
\end{array}
$$

A.turn/m

$\mathrm{X}>\mathrm{r}$
$B=\frac{2 * 10^{-7}}{r^{2}} I x$
$\mathrm{wb} / \mathrm{m}^{2}$

## Inductance of Two Conductor (Single Phase)

$$
\begin{aligned}
\lambda_{\text {total }} & =\lambda_{\text {inside }}+\lambda_{\text {outside }} \\
\lambda_{\text {inside }} & =\int_{0}^{r} \frac{2 * 10^{-7} x I}{r^{2}} * \frac{\pi x^{2}}{\pi r^{2}} d x \\
\lambda_{\text {inside }} & =\int_{0}^{r} \frac{2 * 10^{-7} x^{3}}{r^{4}} d x=\left.\frac{2 * 10^{-7} I}{r^{4}} \frac{1}{4} x^{4}\right|_{0} ^{r} \\
& =\frac{2 * 10^{-7} I}{4 r^{4}} * r^{4}=\frac{1}{2} * 10^{-7} I \quad \text { linkages } / \mathrm{m}
\end{aligned}
$$

## Continue

$$
\begin{aligned}
\lambda_{\text {outside }} & =\int_{r}^{D} \frac{2 * 10^{-7} x I}{r^{2}} * \frac{\pi r^{2}}{\pi x^{2}} d x \\
& =\int_{r}^{D} \frac{2 * 10^{-7 I}}{X} d x=2 * 10^{-7} I \ln \frac{D}{r} \\
\lambda_{\text {outside }} & =2 * 10^{-7} I \ln \frac{D}{r} \quad \text { linkages } / \mathrm{m} \\
\lambda_{\text {total }} & =\lambda_{\text {inside }}+\lambda_{\text {outside }} \\
& =\frac{1}{2} * 10^{-7} I+2 * 10^{-7} I \ln \frac{D}{r}
\end{aligned}
$$

## Continue

$$
\mathrm{L}_{1}=\frac{\lambda_{1}}{I}=10^{-7}\left(2 \ln \frac{D}{r}+\frac{1}{2}\right) \quad \mathrm{H} / \mathrm{m}
$$

In case of non magnetic or hollow conductor

$$
\left.L_{t}=L_{1}+L_{2}=2 L_{1} \text { ( Two identical conductors }\right)
$$

## In Case of Magnetic Conductor

$L=1 \mathrm{O}^{-7}\left(\ln \frac{D}{r}+\frac{1}{2} \frac{\mu}{\mu_{\mathrm{o}}}\right)$
$\mu \quad$ : permeability
$\mu_{r}:$ relative permeability
$X_{t}=2 \pi f L_{t} \quad \Omega$

$$
\lambda=10^{-7} I\left(2 \ln \frac{D}{r}+\frac{1}{2}\right)=2 * 10^{-7} I\left(\ln \frac{D}{r}+\frac{1}{4}\right)
$$

## Continue

$\lambda=2 * 10^{-7} I \ln \frac{D}{r e^{-0.25}}$

Where:
$r e^{-.025}$ : geometric mean radius (GMR) or self - geometric mean distance.

D : distance bet. Two conductors or mutual distance between two conductors

$$
\begin{array}{r}
\begin{array}{r}
\lambda_{a}=10^{-7}\left(\frac{I_{a}}{2} \frac{\mu}{\mu_{0}}+2 I_{a} \ln \frac{D_{a x}}{r}\right) \\
\begin{aligned}
\lambda_{\text {total }}=10^{-7}\left(\frac{I_{a}}{2} \frac{\mu}{\mu_{0}}\right. & +2 I_{a} \ln \frac{D_{a x}}{r} \\
& +2 I_{p} \ln \frac{D_{b x}}{D_{a b}} \\
& \left.+. .+2 \ln \ln \frac{D_{n x}}{D_{a n}}\right)
\end{aligned} \\
\begin{array}{r}
I_{a}+I_{b}+I_{c}+\ldots \ldots+I_{n}=0
\end{array} \\
I_{n}=-\left(I_{a}+I_{b}+I_{c}+\ldots \ldots . .+I_{n-1}\right)
\end{array}
\end{array}
$$

" Closed loop"

## Continue

$$
\begin{aligned}
& \begin{aligned}
& \begin{aligned}
\mathrm{a}_{\mathrm{a}}=10^{-7}\left[\frac{\mathrm{I}_{\mathrm{a}}}{2} \frac{\mu}{\mu_{0}}\right. & +2 \mathrm{I}_{\mathrm{a}}\left(\ln \frac{\mathrm{D}_{\mathrm{ax}}}{\mathrm{r}}-\ln \frac{\mathrm{D}_{\mathrm{nx}}}{\mathrm{D}_{\mathrm{an}}}\right) \\
+ & 2 \mathrm{I}_{\mathrm{b}}\left(\ln \frac{\mathrm{D}_{\mathrm{bx}}}{\mathrm{D}_{\mathrm{ab}}}-\ln \frac{\mathrm{D}_{\mathrm{nx}}}{\mathrm{D}_{\mathrm{ab}}}\right)
\end{aligned} \\
&\left.+\ldots \ldots . .+2 \mathrm{I}_{\mathrm{n}-1}\left(\ln \frac{\mathrm{D}_{\mathrm{nx}}}{\mathrm{D}_{\mathrm{an}}}\right)\right]
\end{aligned}
\end{aligned}
$$

## Continue

$$
\begin{aligned}
\lambda_{a}=10^{-7}\left[\frac{I_{a}}{2} \frac{\mu}{\mu_{0}}\right. & +2 I_{a}\left(\ln \frac{D_{a x}}{r} \cdot \frac{D_{a n}}{D_{n x}}\right) \\
& +2 I_{b}\left(\ln \left(\frac{D_{b x}}{D_{a b}} \cdot \frac{D_{a n}}{D_{n x}}\right)\right) \\
& \left.+\ldots+2 I_{n-1}\left(\ln \left(\frac{D_{n-1 x}}{D_{a n-1}} \cdot \frac{D_{a n}}{D_{n x}}\right)\right)\right]
\end{aligned}
$$

## Continue

$$
\lambda_{a}=10^{-7}\left[\frac{I_{a}}{2} \frac{\mu}{\mu_{0}}+2 I_{a}\left(\ln \frac{D_{a x}}{r} \cdot \frac{D_{a n}}{D_{n x}}\right)\right)
$$

$$
\begin{aligned}
& +2 I_{b}\left(\ln \left(\frac{D_{b x}}{D_{a b}} \cdot \frac{D_{a n}}{D_{n x}}\right)\right) \\
& \left.+\ldots+2 I_{n-1}\left(\ln \left(\frac{D_{n-1 x}}{D_{a n-1}} \cdot \frac{D_{a n}}{D_{n x}}\right)\right)\right]
\end{aligned}
$$

## Continue

When $X$ approaches infinity,

$$
\begin{aligned}
& \frac{D_{a x}}{D_{n x}}=\frac{D_{b x}}{D_{n x}}=\ldots \ldots=\frac{D_{n-1}}{D_{n x}}=1 \\
& \begin{aligned}
\lambda_{a}=10^{-7}\left[\frac{I_{a}}{2} \frac{\mu}{\mu_{0}}\right. & +2 I_{a} \ln \frac{D_{a n}}{r} \\
& +2 I_{b} \ln \frac{D_{a n}}{D_{a b}} \\
& \left.+\ldots+2 I_{n-1} \ln \frac{D_{a n}}{D_{a n-1}}\right]
\end{aligned}
\end{aligned}
$$

## Continue

Since, $-\ln A=\ln (A)^{-1}=\ln \frac{1}{A}$

$$
\begin{aligned}
\lambda_{a}=10^{-7}\left[\frac{I_{a}}{2} \frac{\mu}{\mu_{0}}\right. & +2 I_{a} \ln \frac{1}{r}+2 I_{b} \ln \frac{1}{D_{a b}} \\
& +\ldots+2 I_{n-1} \ln \frac{1}{D_{a n-1}} \\
& \left.+2 \ln D_{a n}\left(I_{a}+I_{b}+\ldots+I_{n-1}\right)\right]
\end{aligned}
$$

## Continue

$$
\begin{aligned}
& \begin{array}{l}
\lambda_{a}=10^{-7}\left[\frac{I_{a}}{2} \frac{\mu}{\mu_{0}}+2 I_{a} \ln \frac{1}{r}+2 I_{b} \ln \frac{1}{D_{a b}}\right. \\
\\
\left.\quad+\ldots+2 I_{f} \ln \frac{1}{D_{a f}}+2 I_{n} \ln \frac{1}{D_{a n}}\right] \\
L_{a}=\frac{\lambda_{a}}{I_{a}} \quad \mathrm{~m} / \mathrm{H}
\end{array} \\
& \mathrm{X}_{\mathrm{La}}=2 \pi \mathrm{fLa} \quad \Omega
\end{aligned}
$$

## General Expression for Inductance of Two Parallel Conductors of Irregular Cross-Section

## Continue

The linkages about the small element I can be obtained by,

$$
\begin{aligned}
\lambda_{1}=2 * 1 \mathrm{O}^{-7} *\left(\frac{I}{n}\right)\left(\frac{1}{4}\right. & +\ln \frac{1}{\mathrm{r}_{1}}+\ln \frac{1}{\mathrm{D}_{12}} \\
& +\ln \frac{1}{\mathrm{D}_{13}}+\ldots \\
& +\ln \frac{1}{D_{1 \mathrm{n}}}-\ln \frac{1}{\mathrm{D}_{1 \mathrm{a}}} \\
& \left.-\ln \frac{1}{\mathrm{D}_{1 \mathrm{~B}}} \ldots-\ln \frac{1}{\mathrm{D}_{1 \mathrm{n}}}\right) \quad \text { Linkage } / m
\end{aligned}
$$

Similarly, $\lambda_{2}, \lambda_{3}, \ldots ., \lambda_{n}$ can be obtained
$\lambda_{\text {total }}=\lambda_{1}+\lambda_{2}+\lambda_{3}+\ldots \ldots+\lambda_{n}$

## The linkages about the conductor are given by $\left(\lambda_{\text {total }}\right)$

$$
\begin{aligned}
& \lambda_{\text {total }}=\frac{2 * 10^{-7}}{n^{2}} I\left[\frac{1}{4}+\ln \frac{1}{r_{1}}+\ln \frac{1}{D_{12}}+\ldots+\ln \frac{1}{D_{1 n}}\right. \\
&+\frac{1}{4}+\ln \frac{1}{r_{2}}+\ln \frac{1}{D_{21}}+\ldots+\ln \frac{1}{D_{2 n}} \\
&+\frac{1}{4}+\ln \frac{1}{r_{n}}+\ln \frac{1}{D_{n 1}}+\ldots+\ln \frac{1}{D_{n n}} \\
&-\ln \frac{1}{D_{1 A}}-\ln \frac{1}{D_{1 B}}-\ldots-\ln \frac{1}{D_{1 n}} \\
&\left.-\ln \frac{1}{D_{2 A}}-\ln \frac{1}{D_{2 B}}-\ldots . \ln \frac{1}{D_{2 n}}\right] \\
& \text { October 16 } \quad
\end{aligned}
$$

## Continue

since $\ln \frac{1}{D_{1}}-\ln \frac{1}{D_{2}}=\ln \frac{1 / D_{1}}{1 / D_{2}}=\ln \frac{D_{2}}{D_{1}}$
$\frac{1}{n^{2}} \ln X=\ln \sqrt[n^{2}]{X}$
$\lambda_{\text {toral }}=2 * 10^{-7} I\left[\frac{1}{4 n}+\ln \frac{\left.\sqrt[n^{2}]{D_{1 A} D_{1 B} \ldots \ldots \ldots . D_{1 n} D_{2 A} D_{2 B} \ldots \ldots \ldots . . D_{2 n}} \frac{n^{2}}{r_{1} D_{12} \ldots \ldots . . D_{1 n} r_{2} D_{21} \ldots \ldots . D_{2 n} \ldots . r_{n} D_{n 1} \ldots}\right]}{}\right.$

## Continue

If n is taken as infinity, the term $\frac{1}{4 n}$ is negligible and approaches to zero, thus,

$$
\begin{aligned}
& \lambda=2 * 10^{-7} I \ln \frac{\sqrt[n^{2}]{D_{1 A} D_{1 B} \cdots \cdots \cdot D_{1 n} D_{2 A} D_{2 B} \cdots \cdot D_{2 n} \cdots .}}{\sqrt[n^{2}]{r_{1} D_{12} \cdots \cdot D_{1 n} r_{2} D_{21} \cdots \cdots \cdots \cdots . . D_{2 n} r_{n}}} \\
& \lambda=2 * 10^{-7} I \ln \frac{D_{m}}{D_{s}} \quad H / m
\end{aligned}
$$

$\boldsymbol{L}=\frac{\lambda}{\boldsymbol{I}}$

## Definitions:

$D_{m}$ : (Geometric mean distance) "GMD": is the distance between the one conductor in coil side and the other conductors in the other coil side.

Ds : (self - geo metric mean distance) "SGMD" or (Geometric mean radius )"GMR" is the distance between the one conductor in coil side and the other conductors in the same coil side

## Inductance of Two Parallel Wires with Single-Phase Circuit

Using general expression

$$
\begin{aligned}
& D_{m}=D \\
& D_{s}=r e^{-0.25} \\
& L=L_{a}+L_{b}
\end{aligned}
$$

H/m
(For both conductors )

## Inductance of Single-Phase Line with Multi-Conductors

using general expression

$$
L=2 * 10^{-7} \ln \frac{D_{m}}{D_{s}} \quad \mathrm{H} / \mathrm{m}
$$

For identical conductors, $\quad r_{a}=r_{b}=r_{x}=r_{y}=r$

$$
D_{m}=\sqrt[2 * 2]{D_{a x} \cdot D_{a y} \cdot D_{b x} \cdot D_{b y}}
$$

Where;

$$
D_{\mathrm{ay}}=\sqrt{\left(D_{\mathrm{ax}}\right)^{2}+\left(D_{\mathrm{xy}}\right)^{2}}
$$

## Continue

$$
\begin{aligned}
& D_{s}=\sqrt[(2)^{2}]{r_{a} \cdot D_{a b} \cdot r_{b} \cdot D_{b a}}=\sqrt[4]{r_{a} D_{a b} r_{b} D_{b a}} \\
& r_{a}=r_{b}=r \quad D_{a b}=D_{b a} \\
& \text { Note }: r_{a}=r e^{-0.25}
\end{aligned} D_{s}=\sqrt{r D_{a b}} .
$$

If $D_{a b}=D_{x y}$, then $D_{s}$ of the conductors on the left hand side as well as on the right hand side is equal.
