Content :
Algebra :
Mathematical Induction - Partial Fractions [Polynomials - Resolution of rational functions into partial fractions - Methods for determining coefficients ]

Finite Series [Summation of series - The difference method ]
Binomial Expansion [ Binomial expansion for negative and fractional indices Determination of a binomial function from its expansion].

Matrices [Matrix Algebra - Products by partitioning - Determinants - Inverse of a matrix - Linear dependence of vectors - The rank of a matrix - System of linear equations - Eigenvalues and eigenvectors - Reduction of a matrix to Diagonal canonical form-Quadratic form.

Theory of Equations: Some Elementary Properties - Equations with given Roots Horner's Method of Reducing an Algebraic Equation - Equations with Integer Coefficients - Equation reduced to quadratic equation - Binomial Equations - De Moiver's Theorem - Cubic Equations - Quartic Equations - Reciprocal Equations -
