| Project Working Group Names | 3 |
| Table of contents | 4 |
| Introduction | 8 |
| | |
| Chapter one : Literature Survey | 9 |
| 1.1 Introduction | 10 |
| 1.2 Sun & Solar Energy | 12 |
| 1.2.1 Solar Radiation characteristics | 12 |
| 1.2.2 Solar Angles & Energy calculations for Earth | 15 |
| 1.2.3 Useful Solar systems and applications | 17 |
| 1.3 Thermal Solar water heating systems | 18 |
| 1.3.1 Introduction of Solar water heating systems | 18 |
| 1.3.2 types of solar water heating systems | 19 |
| 1.3.2.1 Passive systems | 19 |
| 1.3.2.2 Active systems | 20 |
| 1.3.3 Types of solar collectors for Water Heating | 22 |
| 1.3.3.1 Flat plate collectors | 22 |
| 1.3.3.2 Evacuated tube collectors | 23 |
| 1.3.4 Types of solar collectors for electricity generation | 23 |
| 1.3.4.1 Parabolic trough | 23 |
| 1.3.4.2 Parabolic dish | 24 |
| 1.4 Thermal energy storage systems | 25 |
| 1.4.1 Methods of thermal energy storage systems | 26 |

| | |
|--|----|
| 1.4.1.1 Sensible heat energy storage systems | 26 |
| 1.4.1.2 Latent heat energy storage systems | 26 |
| 1.4.1.3 bond heat energy storage systems | 27 |
| 1.4.2 improvement of thermal storage techniques | 27 |
| 1.4.3 applications in solar water heating systems | 29 |
| 1.5 Summary | 32 |
| | |
| Chapter two : Phase Change Material (PCM) | 33 |
| 2.1 Introduction | 34 |
| 2.2 PCM Fundamentals and Technology Basics | 34 |
| 2.2.1 Characteristics and classification | 36 |
| 2.2.1.1Organic PCMs | 37 |
| 2.2.1.2 Inorganic PCMs | 37 |
| 2.2.1.3 Eutectics PCMs | 38 |
| 2.2.2. Applications | 39 |
| 2.2.3 Selection Criteria | 42 |
| 2.3 PCM for Domestic Water Heating | 43 |
| 2.3.1 Operating Theory and the Reason of Using Paraffin Wax | 45 |
| 2.3.2 Advantage of Using Paraffin Wax for solar water heating | |
| 2.3.3 Paraffin Wax Properties | |
| | |
| Chapter three : Test Reg. & Experimental setup | 49 |
| 3.1 Introduction | 50 |
| 3.2 Materials | 50 |
| 3.3 The Manufacturing Process | 52 |

| | |
|---|----|
| 3.3.1 The Collector | 52 |
| 3.3.1.1 The Absorber | 52 |
| 3.3.1.2 Glass Cover | 54 |
| 3.3.1.3 Insulation | 55 |
| 3.3.1.4 Enclosure | 56 |
| 3.3.1.5 The solar collector assemblage | 56 |
| 3.3.2 The Base | 59 |
| 3.3.3 The Tank | 59 |
| 3.3.4 The Operating under Thermosyphon system | 60 |
| 3.4 The Final Arrangement | 62 |
| | |
| Chapter four : Results & Conclusion | 63 |
| 4.1 Introduction | 64 |
| 4.2 The Measurement Devices | 65 |
| 4.2.1 Measurement of Solar Irradiance | 65 |
| 4.2.1.1 Global Solar Irradiance – Pyranometers | 65 |
| 4.2.2 Thermocouples | 67 |
| 4.2.2.1Background | 67 |
| 4.2.2.2 How They Work | 68 |
| 4.2.2.3 Voltage–temperature relationship | 71 |
| 4.3 The Measurement Techniques | 73 |
| 4.3.1 For The solar irradiance | 73 |
| 4.3.2 For the Temperature | 73 |
| 4.4 The Measured Data | 76 |
| 4.4.1 Day 1 – Angle 30° for only water in tank | 76 |

| | |
|--|------------|
| 4.4.2 Day 2 – Angle 30° for water with PCM two capsules together of concentration 0.1 & 0.4 Aluminum powder inside tank | 81 |
| 4.4.3 Day 3– Angle 30° for water with 4 PCM capsules of concentration 0.7 Aluminum powder together inside tank | 89 |
| 4.4.4 Day 4 – Angle 30° for water with 4 PCM capsules of concentration zero Aluminum powder together inside tank | 94 |
| 4.5 conclusion | 97 |
| | |
| Chapter Five : CFD (Computational Fluid Dynamics) | 98 |
| 5.1 Introduction | 99 |
| 5.2 Importance of CFD in engineering studies | 100 |
| 5.3 CFD Applications | 100 |
| 5.4 Physics and Modeling of CFD | 101 |
| 5.5 CFD processes | 103 |
| 5.6 Thermal solar collector modeling on CFD | 105 |
| 5.6.1 Gambit | 106 |
| 5.6.2 Fluent | 109 |
| 5.7 CFD Results | 111 |
