## Photogrammetry 2B Lecture 1: Introduction

Dr. Eng. Hassan Mohamed Hassan Hassan.hussein@feng.bu.edu.eg Geomatics Department

## What you learn from this course

1. Be familiar with various types of Photogrammetric Orientation.
2. To know the theory of photogrammetry, photographic methods and other field considerations.
3. The Relationships of Photogrammetry with Lidar and Terrestrial laser scanning systems.
4. Learn the types of Aerial triangulation.
5. Drone systems.
6. To demonstrate how to use various photogrammetry software.
7. How to plane and ortho rectification of imagery.

## Course Contents :

| Week | Topics |
| :---: | :--- |
| 1 | Revision + coplanarity condition |
| 2 | Linearization of coplanarity condition |
| 3 | Analytical relative orientation |
| 4 | Ground coordinates of aerial photogrammetry |
| 5 | Analytical absolute orientation |
| 6 | Aerial triangulation |
| 7 | Analytical aerial triangulation |
| 8 | Midterm Exam |
| 9 | Orthophoto Generation and Digital Elevation Models |
| 10 | Laser scanning systems |
| 11 | Introduction to Lidar |
| 12 | Introduction to Drone Systems |

## Weighting of Assessments:

| Assessment | Weight |
| :---: | :---: |
| Mid-term Examination | $10 \%$ |
| Semester work | $10 \%$ |
| Oral Examination | $20 \%$ |
| Final Examination | $60 \%$ |
| Total | $100 \%$ |

## COPLANARITY CONDITION

> Definition: is the condition that the two exposure stations of a stereopair, any object point, and its corresponding image points on the two photos all lie in a common plane.
$>$ In the figure, for example, points L1, L2, a1, a2, and A all lie in the same plane.

## COPLANARITY CONDITION

## COPLANARITY CONDITION

> When relative orientation is achieved, the vector R 1 from L1 to A and the vector R2 from L2 to A, these two vectors together with air base vector, $b$, will be coplanar.
$>$ Hence, their scalar triple product is zero. That is:

$$
F_{1}=\vec{b}-\vec{R}_{1}+\vec{R}_{2}=0
$$

## COPLANARITY CONDITION

> Where:

$$
\begin{aligned}
& \vec{b}=\left[\begin{array}{l}
b_{X} \\
b_{Y} \\
b_{Z}
\end{array}\right]=\left[\begin{array}{c}
X_{O 2}-X_{O 1} \\
Y_{O 2}-Y_{O 1} \\
Z_{O 2}-Z_{O 1}
\end{array}\right] \\
& \vec{R}_{1 i}=\left[\begin{array}{c}
X_{1 i} \\
Y_{1 i} \\
Z_{i i}
\end{array}\right]=K_{1} M_{1}^{T}\left[\begin{array}{c}
x_{\mathrm{a} 1}-x_{\mathrm{o}} \\
y_{\mathrm{a} 1}-y_{\mathrm{o}} \\
-f
\end{array}\right] \\
& \vec{R}_{2 i}=\left[\begin{array}{c}
X_{2 i} \\
Y_{2 i} \\
Z_{2 i}
\end{array}\right]=K_{2} M_{2}^{T}\left[\begin{array}{c}
x_{\mathrm{a} 2}-x_{\mathrm{o}} \\
y_{\mathrm{a} 2}-y_{0} \\
-f
\end{array}\right]
\end{aligned}
$$

## COPLANARITY CONDITION

> Where $\mathrm{K}_{1}$ and $\mathrm{K}_{2}$ are scale factors for both left and right photos, respectively.
$>\mathrm{b}_{\mathrm{x}}, \mathrm{b}_{\mathrm{y}}, \mathrm{b}_{\mathrm{z}}$ are Airbase components.
$>\mathrm{M}_{1}$ Rotation matrix of the left photo.
> $\mathrm{M}_{2}$ Rotation matrix of the right photo.
$>X_{a 1}, Y_{a 1}$ coordinates of image point $a_{1}$ in left photo.
$>X_{a 2}, Y_{\mathrm{a} 2}$ coordinates of image point $\mathrm{a}_{2}$ in right photo.
$>$ Xo, Yo coordinates of principle point.
> $F$ CFL of the used camera.

## COPLANARITY CONDITION

- Equation (1) may be written in determinant form as,

$$
F_{1}=\left[\begin{array}{lll}
b_{X} & b_{Y} & b_{Z} \\
X_{1 i} & Y_{1 i} & Z_{1 i} \\
X_{2 i} & Y_{2 i} & Z_{2 i}
\end{array}\right]=0
$$
